Brian:

We will need to use a private lab in order to get the total organic carbon, particle size and total suspended solids analyses for all of the samples in the field sampling plan at this time. That will cost money out of our task order and may limit our ability to collect all of the data we need during this first round of field activities. These particular analyses are not critical at this stage of the RI. We may even be able to reduce the number of samples for these analyses based on the results from the initial round of field activities. I suggest that we do not run the current samples for these parameters. We can use the lab space for the 37 TSS samples for the monitor wells. Please let me know if that is acceptable to you. Let me know if you have any questions.

Thank you,
Bob Owens

Brian,

You have requested analyses for Total Organic Carbon, Particle Size, and Total Suspended Solids. These 3 analyses are not available through the CLP Program. The EPA Region 6 Laboratory has an agreement with the TCEQ Laboratory and they routinely run these analyses for us. Unfortunately, the number of samples requested for Total Organic Carbon and Particle Size is too many for them to be able to accept. They will be able to accept the 37 water samples for Total Suspended Solids during the week of Sept 16.

Brian,

Do you have the contaminants of concern designated with the action levels required yet?

Good afternoon Christy

Attached are the sample request for the Falcon Refining RI sampling event. We are planning 3 weeks of sampling, the week of Sep 9, Sep 16, and Sep 23. Please let me know what additional information you need in addition to the attached files.

Thanks
